

PECKLES-WOOD SHIRE WORLD™

Visitor Action Plan: How to Print Your Custom T-Shirt Prizes!

Congratulations on unlocking your official "Broken Sanctuary" custom apparel graphic! Follow this budget-friendly guide to transform your high-resolution download into a retail-quality t-shirt right from home.

STEP 1: Your High-Quality Design File

Your prize image is completely optimized and ready for printing. To maintain crisp details, review the file specifications below before sending it to a print queue:

Dimensions	2400 x 2400 Pixels
Resolution	300 DPI (Dots Per Inch) — Ideal sweet spot for fabric printing
Physical Size	Scales perfectly into an 8" x 8" center-chest circular graphic
File Format	Download and save explicitly as a high-resolution PNG

STEP 2: Choose Your Inexpensive Printing Method

To acquire a stunning full-color print without spending a fortune, choose one of these two hyper-affordable routes:

Option A: Order a Custom DTF Transfer Online (Cheapest & Easiest)

Estimated Cost: \$3.00 – \$5.00 total

Instead of buying whole packs of specialty paper or expensive home ink cartridges, you can order a single commercial-grade **DTF (Direct to Film)** heat transfer sheet online.

1. Navigate to an online print platform featuring no minimum order policies (such as *Ninja Transfers* or *Sam's DTF Transfers*).
2. Upload your downloaded 2400 x 2400 pixel PNG file.
3. Select an 8" x 8" or 9" x 9" print size layout.
4. Complete checkout. The service will mail you a vibrant, professional transfer sheet ready to iron directly onto your apparel.

Option B: Print Locally Using Siser EasyColor™ DTV

Estimated Cost: \$2.00 – \$3.00

If you prefer to utilize your own inventory of Siser EasyColor DTV transfer sheets, you can generate the print yourself.

CRITICAL WARNING: Do NOT bring your Siser paper to commercial copy centers (like FedEx Office, Staples, or public libraries). These establishments use heavy-duty laser printers that reach intense internal fusion temperatures. They will instantly melt the vinyl sheet, permanently binding it to the internal drums and ruining the machine.

1. **Locate an Inkjet Printer:** Siser EasyColor media is formulated strictly for traditional home desktop **inkjet printers**.
2. **Community Sourcing:** If you lack a home inkjet setup, post a request on local neighborhood apps (like Nextdoor) or community Facebook groups: *"Does anyone have a standard home inkjet printer I could use to print a single sheet of craft t-shirt transfer paper? I have my own paper and can throw a few dollars your way for the ink!"*
3. **Canva Layout Setup:** Open Canva, generate a fresh canvas configured to **Custom Size: 8.5 x 11 inches** (Letter Size), drop your 2400 x 2400 design onto the canvas, stretch the circle asset to measure exactly 8 inches wide, and print using the "High Quality" or "Photo Paper" printer settings.

STEP 3: Securely Apply the Design to Your Shirt

Whether utilizing a professionally printed online DTF sheet or your home-printed Siser paper, pressing the design requires only a few minutes:

1. **Apparel Preparation:** Position a blank cotton, polyester, or poly-blend t-shirt flat across a hard, heat-resistant surface. Smooth the area with an iron for 5 seconds to eliminate residual wrinkles and fabric moisture.
2. **Graphic Alignment:** Place your custom "Broken Sanctuary" transfer face-up in your preferred position on the center chest.

3. **Thermal Pressing:** Cover the transfer entirely with a sheet of clean parchment paper. Press downward firmly using a household clothing iron (configured to Cotton setting, absolute **No Steam**) or an apparel heat press. Apply steady pressure at 305°F to 315°F for exactly 15 seconds.
4. **Carrier Sheet Removal:** Allow the graphic to cool completely down to room temperature (essential for "Cold Peel" applications), then slowly peel back the clear carrier plastic from one corner to reveal your premium Peckles-Wood Shire World brand t-shirt!
